Introduction

About the Author

David Voss has worked in IT since 1996. He began his career as a Microsoft Certified Systems Engineer, implementing and supporting various Microsoft systems. David then focused on LAN, WAN, and Data Center consulting for large businesses and Internet Service Providers. He obtained many Cisco Routing and Switching certifications, including Cisco Certified Internetwork Expert. More recently, David grew an appreciation for the transformative nature of Artificial Intelligence in the IT industry. He believes anyone who wants to learn AI should have the opportunity to do so and created VOSS.AI with that mission in mind.

About VOSS.AI

AI for All™ VOSS.AI creates products and services for anyone who has an interest in learning about Artificial Intelligence. We have chosen Microsoft AI as our platform of choice because Microsoft has made a concerted effort to ensure their AI products are accessible to those new to the field.

Study with Confidence

VOSS.AI is committed to the integrity of the exams, as well as you as a student. This study guide does not contain any material that compromises the integrity of any Microsoft exam. All materials, including practice questions, were developed using the syllabus for the exam and thorough research of published articles.

Bonus Practice Questions

Congratulations on making it through the study guide. As promised we have included additional practice questions on our website. We will add questions frequently.

Question 1 – Multiple Choice

The hallmark of Anomaly detection workloads is when your data has:

a) Two available options
b) Images
c) Imbalanced data
d) Words, phrases
e) Audio

Question 2 – Multiple Choice

The following question is best answered by which workload?

Which images have a cat in them?

a) Prediction/Forecasting Workload
b) Anomaly Detection Workload
c) Natural Language Processing Workload
d) Computer Vision Workload
e) Conversational AI Workload

Question 3 – Fill in the Blank

An _____ occurs when several observations belonging to one class are much higher or lower than those belonging to the other classes.

Question 4 – True or False

T F Semantic segmentation identifies objects at the pixel level.

Question 5 – True or False

T F An example of knowledge mining is the process of identifying items of importance in a medical document.

Question 6 – Fill in the Blank

With _____learning, the dataset consists of labeled examples, and each example consists of features.

Question 7 – Labeling

Put an S by Supervised Behavior and a U by Unsupervised behavior

____ There are specific expectations for the output.
____ The model groups data into clusters so that the complex unstructured data has meaning.
____ Input data points have labels.
____ The algorithms attempt to organize the data to determine patterns or a structure to the data.
____ There are no predefined rules for output.

Question 8 – Fill in the Blank

_____ learning analyzes relationships in the data and finds hidden patterns to define new labels.

Question 9 – Fill in the Blank

Reinforcement learning achieves results through _____.

Question 10 – True of False

T F Classification uses unsupervised learning to form clusters of data.

Question 11 – True or False

T F Classifying images as either cat, dog, or other is an example of multiclass classification

Question 12 – True of False

T F Labels are characteristics that are measured to determine an appropriate feature.

Question 13 – Fill in the Blank

A training dataset enables the machine learning algorithm to _____ relationships between the features and the target variable.

Question 14 - Multiple Choice

The model doesn't learn from _____ set data; instead, the results to allow us to improve upon the hyperparameters.

Question 15 – Fill in the blank

MSE provides average squared error between predicted and _____ values.

Questions added frequently. Please check back often.

Answers to the Practice Questions

Question 1 - C

Question 2 – D

Question 3

An **imbalanced dataset** occurs when several observations belonging to one class are much higher or lower than those belonging to the other classes.

Question 4 – True

Question 5 – True

Question 6 - Supervised

Question 7

Put an S by Supervised Behavior and a U by Unsupervised behavior

__S__ There are specific expectations for the output.
__U__ The model groups data into clusters so that the complex unstructured data has meaning.
__S__ Input data points have labels.
__U__ The algorithms attempt to organize the data to determine patterns or a structure to the data.
__U__ There are no predefined rules for output.

Question 8 - Unsupervised

Unsupervised learning analyzes relationships in the data and finds **hidden patterns** to define new labels.

Question 9 – Trial and error

Question 10 - True

Question 11 – True

Question 12 - False

Question 13 - learn

Question 14 – Validation

Question 15 - actual
